## **DETAILED ACTION**

### ***Election/Restrictions***

Applicant's election of claims 24-31, 36-38, and 40-41 in Paper No. 8 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or

(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

Claims 36-37 and 40-41 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by Hsu et al., U.S. Patent 5,854,108 (see Figures 5(a)-5(c) and column 5, lines 1-54).

Claims 24-25 and 27 are rejected under 35 U.S.C. 102(e) as being anticipated by Chen, U.S. Patent 6,235,581 B1.

Chen shows the invention as claimed including forming alternating trench and active areas (see Figure 4); forming a line of gate stacks 30; forming a source

conductive line 17 along the line of floating gates that electrically interconnects discrete transistor source areas; and providing source forming conductivity enhancing impurity into the discrete transistor source areas (see Figures and column 2, line 47 – column 5, line 64).

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 38 is rejected under 35 U.S.C. 103(a) as being unpatentable over Hsu et al..

Hsu et al. is applied as above but does not disclose where the mask 118 is a resist mask. In response, the examiner takes official notice that it would be obvious to use a photoresist mask as the etch mask in Hsu et al. because it would be easier to perform an etch process.

Claims 26 and 28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chen.

Chen is applied as above but lacks anticipation of the particular order of processing steps and forming a source line of polycide. With regard to the order of processing steps, this is not patentable absent the showing of new or unexpected

results. Furthermore, the examiner takes official notice that the use of polycide source lines is well known in the art.

***Allowable Subject Matter***

Claims 29-31 are allowed.

The following is a statement of reasons for the indication of allowable subject matter: the prior art, either singly or in combination, fails to anticipate or render obvious, the limitations of: out diffusing source forming conductivity enhancing impurity into the discrete transistor source areas from the conductively doped semiconductor material; and patterning the conductively doped semiconductor material into a conductive line, as required by independent claim 29.
